

# **CALCULATOR MINI PROJECT**

Name: \_\_\_\_\_

Class: BE AIDS 2nd Sem

Subject: Programming / Web Development

Project: Simple Calculator

# INTRODUCTION

This project is a simple calculator designed to perform basic arithmetic operations such as addition, subtraction, multiplication and division.

It helps students understand basic programming concepts and user input/output handling.

# OBJECTIVES & FEATURES

- To perform basic arithmetic operations
- To improve logical thinking skills
- To understand user interface design
- To practice programming fundamentals

## PROGRAM / IMPLEMENTATION

The calculator takes two numbers as input and performs operations like +, -, \*, / using conditional statements or JavaScript functions in web-based projects.

Example: if operator == '+': result = a + b

# CONCLUSION

This project helps to understand the basic concept of calculator using programming. It performs arithmetic operations and improves logical thinking and coding skills.

Overall, this project is useful for beginners in programming and web development.
