

MINI PROJECT REPORT

SIMPLE CALCULATOR

USING PYTHON

submitted By **Ashwini Dilip Barve**

second semester , B.E. (AI&DS)

Academic year:2025-26

AIM - To develop a simple calculator program in Python that performs basic arithmetic operations such as Addition, Subtraction, Multiplication, and Division.

OBJECTIVES-

- To understand Python programming basics.
- To use conditional statements and user input.
- To perform arithmetic calculations using Python.

SOFTWARE REQUIREMENT-

- Python 3.x
- IDLE (Python IDLE)

ALGORITHM-

1. Start the program.
2. Accept two numbers and the required operation from the user.
3. Perform the selected arithmetic operation (+, -, *, /).
4. Display the result.
5. Ask the user whether to continue (Y/N).
6. If the user enters Y, repeat steps 2–5; otherwise, stop the program.
7. End.

PROGRAM CODE

File Edit Format Run Options Window Help

```
while True:

    print("\nSimple Calculator")

    a = int(input("Enter first number: "))
    b = int(input("Enter second number: "))

    print("1. Addition")
    print("2. Subtraction")
    print("3. Multiplication")
    print("4. Division")
    print("5. Exit")

    choice = int(input("Enter your choice: "))

    if choice == 1:
        print("Result =", a + b)

    elif choice == 2:
        print("Result =", a - b)

    elif choice == 3:
        print("Result =", a * b)

    elif choice == 4:
        print("Result =", a / b)

    elif choice == 5:
        print("Thank You!")
        break

    else:
        print("Invalid Choice")
```

OUTPUT

```
*IDLE Shell 3.14.5*
File Edit Shell Debug Options Window Help

Simple Calculator
Enter first number: 5
Enter second number: 10
1. Addition
2. Subtraction
3. Multiplication
4. Division
5. Exit
Enter your choice: 1
Result = 15

Simple Calculator
Enter first number: 5
Enter second number: 10
1. Addition
2. Subtraction
3. Multiplication
4. Division
5. Exit
Enter your choice: 2
Result = -5

Simple Calculator
Enter first number: 5
Enter second number: 10
1. Addition
2. Subtraction
3. Multiplication
4. Division
5. Exit
Enter your choice: 3
Result = 50
```

CONCLUSION-

The Simple Calculator using Python was successfully designed and implemented. The program performs basic arithmetic operations such as addition, subtraction, multiplication, and division. This project helped in understanding Python programming concepts like user input, conditional statements, loops, and arithmetic operators. It demonstrates how Python can be used to develop simple and useful applications.
